

**INDUSTRIES**

SMART VERTICAL ACCESS

## **XE5 TOP-DOWN HOIST**

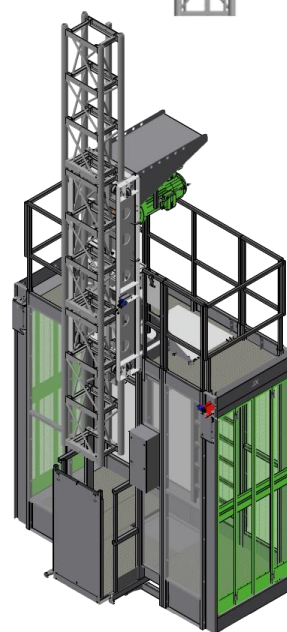

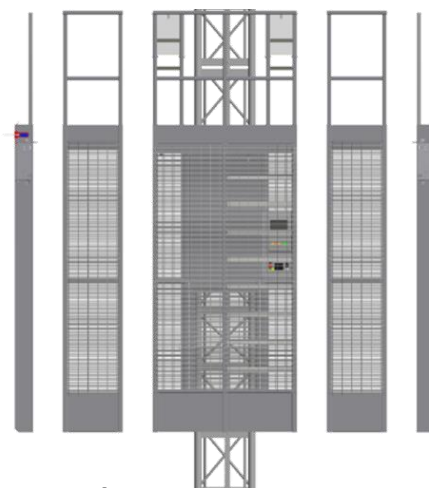

XL top-down hoist provides underground access from day 1 and easy integration even in dense area

### **BENEFITS**

- **Small footprint**  
Underground works are less impacted with the compact arrangement of the machine
- **Pit level landing**  
Permanent access to the excavation thanks to the virtual wall barrier
- **Easy deployment**  
Top-down extension is carried out from within the car and provides unprecedented safety
- **Versatile**  
Either suspended or grounded, the hoist adapts to any site configuration
- **Built in Safety**  
Features include overload sensors, centrifugal brakes, overspeed brake and a fall protection device

- The supporting bracket withstands **80 meters** of mast. Deeper configurations come with additional supporting ties.
- The initial installation is quick and safe thanks to a smart **all-in-one erection method** with one crane lift only.
- The extension of the mast tower with section of 1.5 meter can be carried out by trained **plant personnel**. Site keeps control on its own operations.
- The **modular car design** allows two different arrangements to provide the best solution on dense and constraint work site.
- The patented **fall protection device** ensure the hoist does not disengage from the mast during erection. It is an essential safety component.

## MAIN SPECIFICATIONS

XE5 Series	TD5	TD10
Passengers	5	10
Capacity (kg)	500	1,000
Speed (m/min)	24-36	24-36
Footprint (m)	1.5 x 1.5	2.5 x 1.5
